

Mast Bracket

Bracket - side view

Bracket - front view

Material is stainless steel - 316 A4.
All dimensions are in mm.

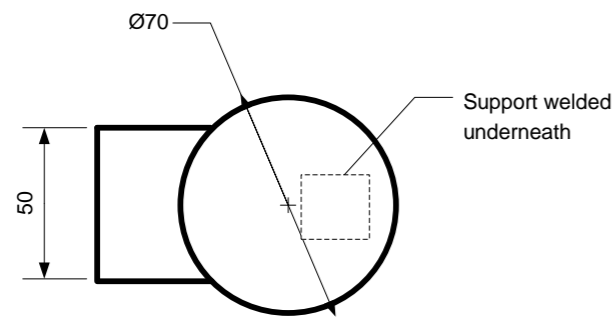

Bracket & support – 2mm,
Bracket front & platform – it is one piece.

'U' shaped piece for platform support, is welded or otherwise fixed under the platform (no rivets or bolts). I needs 1, M5 hole on each side, 5mm off the bottom.

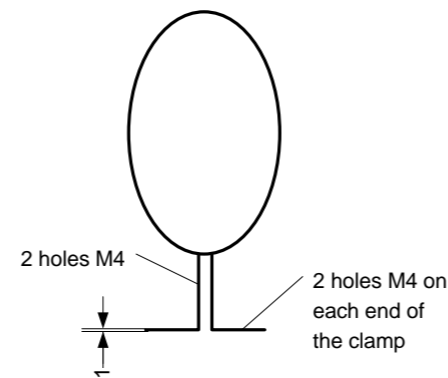

Clamp (like a hose clip), thin strip (1mm) to round and clamp on the mast.
It may be fastened with 1, M4 bolt, so it needs correct holes, as per drawing. **If there is a better way to fasten the clamp, please advise.**

Also, 2 M4 holes on each end of the strip need to be drilled for later fastening to the front of the bracket and so bracket has to have matching holes.
